Abstract	i	
1	Introduction	1
2	Single fluid magnetohydrodynamics	5
2.1	Magnetohydrodynamic equations	5
2.2	Galilei invariance of Maxwell equations	7
2.3	Conservation of energy	8
2.3.1	Nonlinear form	8
2.3.2	Linearized form and energy principle for static equilibria	9
2.4	Magnetohydrodynamic waves in homogeneous plasmas	11
2.5	Linearized one dimensional reduced magnetohydrodynamic equations	15
2.5.1	Derivation	15
2.5.2	Hermiticity of Alfvén operator	16
2.6	Spectra of Alfvén waves in static equilibria	19
2.6.1	Slab geometry — continuous spectra —	20
2.6.2	Cylindrical geometry	22
2.7	Non-Hermiticity in shear flow systems	23
3	Non-resonant type pressure driven instabilities in stellarators	27
3.1	Introduction	27
3.2	Eigenmode equation	28
3.3	Analytic solution of eigenmode equation	31
3.3.1	Eigenmode properties for shearless case	31

3.3.2	Radial structure of most unstable mode	32
3.4	Numerical solution of eigenmode equation	33
3.4.1	Resonant and non-resonant modes for standard pressure profiles	33
3.4.2	Resonant modes for locally flattened pressure profiles at resonant surface	36
3.4.3	Behavior of non-resonant type mode	41
3.5	Summary	45
4	Phase mixing damping of surface Alfvén wave in a slab plasma	47
4.1	Introduction	47
4.2	Alfvén wave equation	48
4.3	Incompressible limit of spectral equation	50
4.4	Derivation of dispersion relation	52
4.5	Analytic solutions of dispersion relation	54
4.6	Numerical solutions of dispersion relation	55
4.7	Summary	56
5	External kink instabilities in presence of resistive wall	59
5.1	Introduction	59
5.2	Non-Hermiticity of Kelvin-Helmholtz instability	62
5.3	Model equations for resistive wall mode	66
5.4	Surface current model	67
5.5	Non-Hermiticity of resistive wall mode	69
5.5.1	Calculation of image current in slab geometry	69
5.5.2	Behavior of eigenvalue and eigenvector of resistive wall mode .	71
5.6	Summary	74
6	Interchange instabilities of slab plasmas with sheared flows	77
6.1	Introduction	77
6.2	Non-Hermiticity of shear flow systems	79
6.3	Formulation of interchange instabilities	81
6.4	Derivation of ordinary differential equation for Kelvin's mode	83

6.5	Asymptotic and transient behavior of Kelvin's mode	86
6.5.1	Transient behavior	86
6.5.2	Asymptotic behavior	88
6.6	Interchange perturbations perpendicular to ambient magnetic field . .	90
6.7	Effect of magnetic shear on sheared plasma flow	91
6.8	Summary	92
7	Spectral theory for surface wave model of Rayleigh equation	95
7.1	Introduction	95
7.2	Generalized Rayleigh equation	97
7.3	Formal spectra of generalized Rayleigh equation	99
7.4	Resonance between point and continuous spectra	102
7.5	Kelvin-Helmholtz system	104
7.6	Spectral resolution of coupled non-Hermitian generator	106
7.6.1	Mathematical formulation of the generator	107
7.6.2	Spectral resolution of the generator	108
7.6.3	Spectral representation of the propagator	110
7.7	Laplace transformation	111
7.8	Summary	113
8	Concluding remarks	115
A	Equations of state	119
B	Spectral theory	123
B.1	Finite dimensional operators	123
B.1.1	Spectral resolution of Hermitian matrices	124
B.1.2	Algebraic instability of Jordan matrices	127
B.2	Differential operator	128
B.2.1	Spectral resolution	128
B.2.2	Fourier transformation	130
B.2.3	Laplace transformation	131

C Electrostatic oscillations in an unmagnetized plasma	133
C.1 Langmuir oscillation	133
C.2 Vlasov-Poisson system	134
C.3 Spectrum of operators in Vlasov-Poisson system	136
C.3.1 Ballistic response	136
C.3.2 Operator $(\partial_v f_0) \int \cdot \, dv$	137
C.4 Cold plasma with $f_0(v) = n_0 \delta(v)$	138
C.5 General continuous profile $f_0(v)$	140
Vector relations	141
Quasi-toroidal coordinates	142
Acknowledgements	143
Bibliography	145
